

Leading edge technology and sleek, supra aural design puts the DC PRO-X a generation ahead of any other aviation headset in its class. The perfect combination of comfort and performance. From its feather-light yet extremely rugged magnesium alloy headband and suspension system, to its best-in-class Hybrid noise cancelling technology and Bluetooth compatibility, you simply won't find a better headset or a better value. Compact, multi-function control module puts a variety of operational functions right at your fingertips. Roll over numerals surrounding module at right to view features. Hybrid Electronic Noise Cancelling features not one, but two microphones, one located on the exterior of the dome and isolated from the speaker (feed-forward) and a second internal microphone placed near the speaker (feed-back). The exterior microphone acquires the noise before it gets to the ear canal. Working in concert with the internal microphone, the signals are then inverted to produce a reverse, anti-noise signal, resulting in unsurpassed active noise reduction performance. Specs: •Internal microphone signal provides feed-back noise reduction •External microphone signal provides feed-forward noise reduction •Peak attenuation, 30dB @ 150Hz •ENC attenuation range, 20Hz 1KHz •Up to 50 hour battery life (2 AA batteries) •Dual Voice Coil transducer for Fail Safe operation •Digital Signal Processor (DSP) provides clear communication and high fidelity audio
